Fixes & Improvements for 3D-MU

1. 3D Printing Cost Calculator

- Fix Filament Pricing: Add a field for filament weight (since filament price is tied to weight).
- Fix Input Boxes: Ensure values in the boxes disappear when clicked, like the other pages.
- Fix Labor Cost Error: Anything under Labor Cost should not need to be clicked. Remove the error requiring it to be clicked.

2. SEO Tool Issues

- Fix Generation Issue: The SEO tool does not load the generated information. Ensure data displays properly after clicking 'Generate'.

3. Social Media Section

- Fix Image Layout:
- - The first uploaded image should be at the top.
- - The three additional images should be below it.
- - The upload button should be placed under the three images.
- Fix Text Visibility: Make the text inside value boxes darker (currently too light).
- Fix Copy Box Output: Generated content should appear in one copy box layout:
- - Title
- - Product Description with Emojis
- - Hashtags
- No one wants to copy from multiple boxes, keep it all in one place.

4. Multi-Platform Product Listing

- Fix Image Layout: Follow the same fix as Social Media.
- - The first uploaded image should be at the top.
- - The three additional images should be below it.
- - The upload button should be placed under the three images.
- Improve AI Generation: Titles & descriptions need more details, make them longer & more descriptive.
- Fix Price Calculation: Ensure price carries the 1 over correctly in calculations.
